The first edition of this publication was registered with the Library of Congress with the call number QC20.C66.2004.

The second edition was registered with the Library of Congress with the LCCN 2019947884. It has been assigned the ISBN 9780961342968 and carries the Library of Congress call number QC20.C66.2019.

Table of Contents

Preface to the Second Edition	iii
Acknowledgements	vii
Disclaimer	xi
Table of Contents	xv
1 Preliminaries	1
1.1 An Orientation to Computers	2
1.1.1 A Simple Responsive Machine	3
1.1.2 Character Codes	4
1.1.3 The ASCII Character Set	5
1.1.4 Representation of Data in a Computer	6
1.2 Files and Directories	8
1.3 Operating Systems	9
1.4 Glossary, Conventions, and Understandings	9
1.5 Assumed Background	11
1.5.1 The Gamma Function	12
1.5.2 The Laplace Transform	13
1.6 Licensing Issues	14
2 Introduction to IDL	15
2.1 Beginning an IDL Session	15
2.2 Basic Entities in IDL	16
2.2.1 Data Types	16
2.2.2 Variable Names	18
2.2.3 Assignment of Values to Variables	18
2.2.4 Commands	19
2.3 A Sampling of IDL Capabilities	19
2.3.1 Creating and Examining Arrays	19
2.3.2 Simple Mathematical Manipulations	23
2.3.3 A Further Note on Array Indices; Matrix Multiplication	24
2.3.4 Solving Linear Equations	25
2.3.5 A First Graph	26
2.4 Saving and Retrieving the IDL Session	28
2.5 Loops, Logical Expressions, and Conditionals	31
2.6 Reading Data from a File	33
2.7 On-line Help	34
2.8 Pro-Files	35
2.9 Eigenvalues and Eigenvectors	39
2.10 Graphing Scalar Functions of One Variable	40
2.10.1 The Basic Strategy	41
2.10.2 Plotting Several Graphs on One Set of Axes	41
2.10.3 Polar Plots and Custom Axes	42
2.10.4 Multiple Plots On a Page	44
2.10.5 Plotting Experimental Data	44

2.11	Making Hard Copy	47
2.11.1	... of Text	47
2.11.2	... of Graphs	48
2.12	Graphing Scalar Functions of Two Variables	48
2.12.1	A Preliminary: The Procedure <code>lugen_grid</code>	49
2.12.2	Surface Plots: The Procedure <code>surface</code>	50
2.12.3	Contour Plots: The Procedure <code>contour</code>	52
2.12.4	Shaded Surfaces: The Procedure <code>shade_surf</code>	53
2.12.5	The Procedure <code>xsurface</code>	54
2.12.6	The Procedure <code>show3</code>	55
2.12.7	Functions of Two Variables in Polar Coordinates	55
2.13	Graphing Scalar Functions of Three Variables	56
2.13.1	Reduction to Two-Dimensional Displays	57
2.13.2	Isosurfaces	60
2.13.3	Other IDL Routines	61
2.14	Graphing Vector Fields	62
2.14.1	The Procedure <code>velovect</code>	63
2.14.2	The Procedure <code>vel</code>	63
2.14.3	The Procedure <code>plot_field</code>	64
2.14.4	More Elaborate Displays	65
2.14.5	Three-Dimensional Vector Fields	65
2.15	Animation	66
2.16	Advanced Graphing Features	68
2.16.1	Fonts	68
2.16.2	Space Curves	69
2.16.3	System Variables	71
2.16.4	Using Multiple Windows	72
2.16.5	Scaling so Circles are Circles	73
2.16.6	Working with Color	74
2.17	Miscellaneous Occasionally Useful Tidbits	76
2.17.1	Specifying Directories	76
2.17.2	IDL's Default Directory	76
2.17.3	Customizing IDL	77
2.17.4	IDL's Search Path	77
2.17.5	Restoring IDL's Initial State	78
2.17.6	Common Storage in IDL	78
2.17.7	Reading Data from the Keyboard	78
2.17.8	NaN and Inf	79
2.18	References	79
2.19	Exercises	80
2.19.1	Writing IDL Statements	80
2.19.2	Finding Eigenvalues and Eigenvectors	81
2.19.3	Graphing Scalar Functions of a Single Variable	82
2.19.4	Graphing Scalar Functions of Two Variables	84
2.19.5	Graphing Scalar Functions of Three Variables	86
2.19.6	Graphing Vector Fields	86
2.19.7	Animation	88
2.19.8	Supplementary Exercises	89
2.A	Listing of <code>lugen_grid</code>	90
3	Introduction to MATLAB	91
3.1	Beginning a MATLAB Session	91
3.2	Basic Entities in MATLAB	93
3.2.1	Data Types	93
3.2.2	Variable Names	93
3.2.3	Assignment of Values to Variables	93
3.2.4	Commands	94
3.3	A Sampling of MATLAB Capabilities	95
3.3.1	Creating and Examining Arrays	95
3.3.2	Simple Mathematical Manipulations	98

3.3.3	Matrix Manipulations	99
3.3.4	Solving Linear Equations	100
3.3.5	A First Graph	101
3.4	Properties, Objects, and Handles	104
3.5	Saving and Retrieving the MATLAB Session	106
3.6	Loops, Logical Expressions, and Conditionals	108
3.7	Reading Data from a File	110
3.8	On-line Help	112
3.9	M-Files	113
3.10	Eigenvalues and Eigenvectors	117
3.11	Graphing Scalar Functions of One Variable	118
3.11.1	The Basic Strategy	119
3.11.2	Plotting Several Graphs on One Set of Axes	119
3.11.3	Polar Plots and Custom Axes	121
3.11.4	Multiple Plots On a Page	122
3.11.5	Plotting Experimental Data	122
3.12	Making Hard Copy	125
3.12.1	... of Text	125
3.12.2	... of Graphs	126
3.13	Graphing Scalar Functions of Two Variables	126
3.13.1	A Preliminary: The Function <code>meshgrid</code>	127
3.13.2	Surface Plots: The Function <code>mesh</code>	128
3.13.3	Contour Plots: The Function <code>contour</code>	130
3.13.4	Shaded Surfaces: The Function <code>surf</code>	131
3.13.5	Features of the <i>Figure</i> Window	134
3.13.6	The Functions <code>meshc</code> , <code>surfc</code> , and <code>surf1</code>	134
3.13.7	Functions of Two Variables in Polar Coordinates	135
3.14	Graphing Scalar Functions of Three Variables	137
3.14.1	Reduction to Two-Dimensional Displays	137
3.14.2	Isosurfaces	140
3.15	Graphing Vector Fields	141
3.15.1	The Function <code>quiver</code>	143
3.15.2	More Elaborate Displays	144
3.15.3	Three-Dimensional Vector Fields	144
3.16	Animation	145
3.17	Advanced Graphing Features	147
3.17.1	Fonts	147
3.17.2	Space Curves	149
3.17.3	Using Multiple Windows	150
3.17.4	Customizing Axes	151
3.17.5	Working with Color	152
3.18	Miscellaneous Occasionally Useful Tidbits	153
3.18.1	Specifying Directories	153
3.18.2	MATLAB's Current Directory	154
3.18.3	MATLAB's Search Path	154
3.18.4	Customizing MATLAB	155
3.18.5	Restoring MATLAB's Initial State	155
3.18.6	The Command <code>format</code>	155
3.18.7	Suppressing Axes	155
3.18.8	Positioning Axes	156
3.18.9	Distinguishing Graphs on a Single Set of Axes	156
3.18.10	Reading Data from the Keyboard	157
3.18.11	Writing Data to the Screen	157
3.18.12	Exiting from Procedures	158
3.19	References	158
3.20	Exercises	159
3.20.1	Writing MATLAB Statements	159
3.20.2	Finding Eigenvalues and Eigenvectors	160
3.20.3	Graphing Scalar Functions of a Single Variable	161
3.20.4	Graphing Scalar Functions of Two Variables	163

3.20.5	Graphing Scalar Functions of Three Variables	164
3.20.6	Graphing Vector Fields	165
3.20.7	Animation	167
3.20.8	Supplementary Exercises	167
4	Introduction to OCTAVE	169
4.1	Beginning an OCTAVE Session	170
4.2	Basic Entities in OCTAVE	171
4.2.1	Data Types	171
4.2.2	Variable Names	171
4.2.3	Assignment of Values to Variables	172
4.2.4	Commands	172
4.3	A Sampling of OCTAVE Capabilities	173
4.3.1	Creating and Examining Arrays	173
4.3.2	Simple Mathematical Manipulations	176
4.3.3	Matrix Manipulations	177
4.3.4	Solving Linear Equations	178
4.3.5	A First Graph	179
4.4	Properties, Objects, and Handles	182
4.5	Saving and Retrieving the OCTAVE Session	184
4.6	Loops, Logical Expressions, and Conditionals	186
4.7	Reading Data from a File	189
4.8	On-line Help	191
4.9	m-Files	191
4.10	Eigenvalues and Eigenvectors	195
4.11	Graphing Scalar Functions of One Variable	197
4.11.1	The Basic Strategy	197
4.11.2	Marking Points:	197
4.11.3	Plotting Several Graphs on One Set of Axes	198
4.11.4	Polar Plots and Custom Axes	199
4.11.5	Multiple Plots On a Page	200
4.11.6	Plotting Experimental Data	201
4.12	Making Hard Copy	203
4.12.1	... of Text	203
4.12.2	... of Graphs	203
4.13	Graphing Scalar Functions of Two Variables	205
4.13.1	A Preliminary: The Function <code>meshgrid</code>	205
4.13.2	Surface Plots: The Function <code>mesh</code>	206
4.13.3	Shaded Surfaces: The Function <code>surf</code>	209
4.13.4	Contour Plots: The Function <code>contour</code>	211
4.13.5	The Functions <code>meshc</code> , <code>surfc</code> , and <code>surf1</code>	213
4.13.6	Functions of Two Variables in Polar Coordinates	213
4.14	Graphing Scalar Functions of Three Variables	214
4.14.1	Reduction to Two-Dimensional Displays	215
4.14.2	Isosurfaces	218
4.15	Graphing Vector Fields	220
4.15.1	The Function <code>quiver</code>	221
4.15.2	More Elaborate Displays	221
4.15.3	Three-Dimensional Vector Fields	223
4.16	Animation	223
4.17	Advanced Graphing Features	225
4.17.1	Fonts	225
4.17.2	Space Curves	227
4.17.3	Using Multiple Windows	228
4.17.4	Customizing Axes	229
4.18	Miscellaneous Occasionally Useful Tidbits	230
4.18.1	Specifying Directories	231
4.18.2	Deleting Variables No Longer Needed	231
4.18.3	OCTAVE's Current Directory	231
4.18.4	OCTAVE's Search Path	232

4.18.5	Customizing OCTAVE	232
4.18.6	Restoring OCTAVE's Initial State	233
4.18.7	The Command <code>format</code>	233
4.18.8	Reading Data from the Keyboard	233
4.18.9	Writing Data to the Screen	234
4.18.10	Exiting from Procedures	234
4.19	References	235
4.20	Exercises	235
4.20.1	Writing OCTAVE Statements	235
4.20.2	Finding Eigenvalues and Eigenvectors	236
4.20.3	Graphing Scalar Functions of a Single Variable	237
4.20.4	Graphing Scalar Functions of Two Variables	239
4.20.5	Graphing Scalar Functions of Three Variables	240
4.20.6	Graphing Two-Dimensional Vector Fields	241
4.20.7	Animation	243
4.20.8	Supplementary Exercises	244
5	Introduction to PYTHON	245
5.1	Beginning a PYTHON Session	246
5.2	Basic Entities in PYTHON	247
5.2.1	Data Types	247
5.2.2	Variable Names	247
5.2.3	Assignment of Values to Variables	248
5.2.4	Commands	248
5.2.5	PYTHON Modules	249
5.3	A Sampling of PYTHON Capabilities	250
5.3.1	Using PYTHON Interactively	250
5.3.2	Creating and Examining Strings, Tuples, Lists, and Sets	252
5.3.3	Interrogating and Adjusting the Symbol Table	254
5.3.4	Creating and Examining Arrays	254
5.3.5	Creating and Manipulating Matrices	257
5.3.6	Complex Numbers	258
5.3.7	Solving Linear Equations	259
5.3.8	Data and Method Attributes of Variables	260
5.3.9	A First Graph	261
5.4	Loops, Logical Expressions, and Conditionals	264
5.5	Eigenvalues and Eigenvectors	266
5.6	The PYTHON Edit Window and Stored Programs	268
5.6.1	A Quick Example of a Stored Program	268
5.6.2	Reading Data From a File; Radioactive Decay	270
5.6.3	Writing Data To a File; Formatting Output	272
5.7	Defining Functions	274
5.7.1	Format of a Function Definition	274
5.7.2	The Function <code>luplot</code>	275
5.7.3	Using Global Variables	276
5.8	On-Line Help	278
5.9	Graphing Scalar Functions of One Variable	278
5.9.1	The Basic Strategy	280
5.9.2	Plotting Several Graphs on One Set of Axes	280
5.9.3	Polar Plots and Custom Axes	282
5.9.4	Multiple Plots In a Single Window	283
5.9.5	Plotting Experimental Data	285
5.10	Making Hard Copy	288
5.10.1	... of Text	288
5.10.2	... of Graphs	288
5.11	Graphing Scalar Functions of Two Variables	289
5.11.1	A Preliminary: The Function <code>meshgrid</code>	290
5.11.2	Surface Plots: The Commands <code>plot_wireframe</code> and <code>plot_surface</code>	291
5.11.3	Contour Plots: The Command <code>contour</code>	294
5.11.4	Shaded Surfaces: The Command <code>plot_surface</code> Again	296

5.11.5	Features of the <i>Figure</i> Window	297
5.11.6	Functions of Two Variables in Polar Coordinates	298
5.12	Graphing Scalar Functions of Three Variables	300
5.12.1	Reduction to Two-Dimensional Displays	301
5.12.2	Isosurfaces	302
5.13	Graphing Vector Fields	305
5.13.1	The Function <code>quiver</code>	306
5.13.2	More Elaborate Displays	307
5.13.3	Three-Dimensional Vector Fields	308
5.14	Animation	309
5.14.1	The Basic Command	310
5.14.2	Motion of a Vibrating String I	310
5.14.3	Motion of an L-Shaped Drumhead	312
5.14.4	Trajectory of a Projectile in Uniform Gravity	314
5.14.5	Motion of a Vibrating String II	316
5.15	Advanced Graphing Features	317
5.15.1	Mathematical Symbols and Greek Characters	317
5.15.2	Space Curves	317
5.15.3	Using Multiple Windows	318
5.15.4	Scaling so Circles are Circles	319
5.15.5	Customizing Axes	319
5.15.6	Alternative Specifications of Color	321
5.15.7	Interactive Plotting	322
5.16	Miscellaneous Occasionally Useful Tidbits	323
5.16.1	Find, Change Current Directory	323
5.16.2	Setting the Search Path	324
5.16.3	Customizing PYTHON	324
5.16.4	Restoring PYTHON's Initial State	326
5.16.5	Reading Data from the Keyboard	327
5.16.6	Error Trapping	328
5.17	References	328
5.18	Exercises	329
5.18.1	Writing PYTHON Statements	329
5.18.2	Finding Eigenvalues and Eigenvectors	330
5.18.3	Graphing Scalar Functions of a Single Variable	331
5.18.4	Graphing Scalar Functions of Two Variables	333
5.18.5	Graphing Scalar Functions of Three Variables	334
5.18.6	Graphing Vector Fields	335
5.18.7	Animation	337
5.18.8	Animation	338
5.A	Listing of <code>plotradio.py</code>	339
5.B	Listing of <code>rcfilter.py</code>	339
5.C	Listing of <code>stwave.py</code>	340
5.D	Listing of <code>drumhead.py</code>	341
5.E	Listing of <code>projectile.py</code>	343
5.F	Listing of <code>stringanim.py</code>	343
6	Introduction to MAXIMA	345
6.1	Beginning a MAXIMA Session	346
6.2	On-Line Help	347
6.3	Basic Entities in MAXIMA	349
6.4	Variable Names in MAXIMA	349
6.5	Expressions in MAXIMA	349
6.6	Binding Expressions to Variables; Defining Functions	351
6.7	Using MAXIMA	352
6.7.1	... for Arithmetic	353
6.7.2	... for Algebra	354
6.7.3	... for Complex Variables	356
6.7.4	... for Trigonometry	357
6.7.5	... for Algebraic Equations	358

6.7.6	... for Basic Calculus	360
6.7.7	... for Laplace Transforms	361
6.7.8	... for Ordinary Differential Equations	362
6.7.9	... for Lists, Matrices, and Arrays	365
6.7.10	... for Vector Calculus	367
6.8	Loops, Logical Expressions, and Conditionals	369
6.9	Command Files	371
6.10	High-Resolution Plotting	375
6.11	Making Hard Copy	382
6.11.1	... of Text	382
6.11.2	... of Graphs	384
6.12	Output in L ^A T _E X Format	384
6.13	Animation	385
6.14	Using the Workbook	385
6.15	Pattern Matching	386
6.15.1	Search and Replace: Small Angle Approximations	386
6.15.2	Simplification Rules	388
6.15.3	Pattern Matching Functions	389
6.16	Miscellaneous Occasionally Useful Tidbits	389
6.16.1	Specifying directories	389
6.16.2	MAXIMA's Default Directory	389
6.16.3	MAXIMA's Search Path	390
6.16.4	Customizing MAXIMA	391
6.16.5	Restoring MAXIMA's Initial State	391
6.16.6	Placing Text in Graphs	391
6.16.7	Space Curves	392
6.17	Miscellaneous Commands	392
6.18	References	393
6.19	Exercises	394
7	Introduction to MAPLE	405
7.1	Beginning a MAPLE Session	405
7.2	On-Line Help	407
7.3	Basic Entities in MAPLE	408
7.4	Variable Names in MAPLE	409
7.5	Expressions in MAPLE	409
7.6	Assigning Values to Variables; Defining Functions	410
7.7	Creating and Examining Basic Entities	412
7.7.1	Sequences	412
7.7.2	Sets	413
7.7.3	Lists	413
7.7.4	Vectors, Arrays, and Matrices	413
7.7.5	Conversions	416
7.8	Using MAPLE	417
7.8.1	... for Arithmetic	418
7.8.2	... for Algebra	418
7.8.3	... for Complex Variables	422
7.8.4	... for Trigonometry	423
7.8.5	... for Algebraic Equations	424
7.8.6	... for Manipulating Arrays	425
7.8.7	... for Basic Calculus	428
7.8.8	... for Laplace Transforms	431
7.8.9	... for Ordinary Differential Equations	431
7.8.10	... for Vector Calculus	436
7.9	Packages	438
7.10	Loops, Logical Expressions, and Conditionals	438
7.11	Command Files	440
7.12	High-Resolution Graphing	442
7.13	Making Hard Copy	446
7.13.1	... of Text and Character Graphics in the CLI	447

7.13.2	... of High-Resolution Graphs from the CLI	447
7.13.3	... of Text and Inline Graphics in the GUI	448
7.13.4	... of Window Graphics in the GUI	448
7.14	Output in L ^A T _E X Format	449
7.15	Animation	450
7.16	Using the Notebook	450
7.17	Miscellaneous Occasionally Useful Tidbits	452
7.17.1	Specifying Directories	452
7.17.2	MAPLE's Default Directory	452
7.17.3	MAPLE's Search Path	453
7.17.4	Customizing MAPLE	453
7.17.5	Restoring MAPLE's Initial State	454
7.17.6	Space Curves	454
7.18	Miscellaneous Commands	454
7.18.0.1	• <code>assume, additionally, about</code>	454
7.18.0.2	• <code>expand</code>	456
7.18.0.3	• <code>convert</code>	456
7.18.0.4	• <code>simplify</code>	456
7.18.0.5	• <code>map</code>	456
7.18.0.6	• <code>unapply</code>	457
7.18.0.7	• <code>interface</code>	457
7.18.0.8	• <code>print</code>	457
7.18.0.9	• <code>piecewise</code>	458
7.18.0.10	• Other Commands	458
7.19	References	459

14.5.2	Equilibrium Points	1120
14.5.3	Natural Frequencies	1121
14.5.4	Range of Projectile in Viscous Medium	1122
14.6	Algorithms for Finding Roots Numerically	1124
14.6.1	The Method of Bisection	1124
14.6.2	Newton's Method	1125
14.6.3	Other Methods	1125
14.6.4	Assessing Accuracy	1126
14.7	Finding Roots Numerically with IDL	1127
14.7.1	Classical Turning Points	1128
14.7.2	Natural Frequencies	1129
14.7.3	Range of Projectile	1130
14.7.4	Energy Levels in Quantum Well	1133
14.8	Finding Roots Numerically with MATLAB	1136
14.8.1	Classical Turning Points	1137
14.8.2	Natural Frequencies	1138
14.8.3	Range of Projectile	1139
14.8.4	Energy Levels in Quantum Well	1141
14.9	Finding Roots Numerically with OCTAVE	1144
14.9.1	Classical Turning Points	1146
14.9.2	Natural Frequencies	1147
14.9.3	Range of Projectile	1148
14.9.4	Energy Levels in Quantum Well	1151
14.10	Finding Roots Numerically with PYTHON	1154
14.10.1	Classical Turning Points	1155
14.10.2	Natural Frequencies	1157
14.10.3	Range of Projectile	1157
14.10.4	Energy Levels in Quantum Well	1161
14.11	Finding Roots Numerically with MAXIMA	1163
14.11.1	Classical Turning Points	1165
14.11.2	Range of Projectile	1166
14.11.3	Energy Levels in Quantum Well	1167
14.12	Finding Roots Numerically with MAPLE	1169
14.12.1	Classical Turning Points	1170
14.12.2	Range of Projectile	1170
14.12.3	Energy Levels in Quantum Well	1171
14.13	Finding Roots Numerically with <i>Mathematica</i>	1173
14.13.1	Classical Turning Points	1176
14.13.2	Range of Projectile	1176
14.13.3	Energy Levels in Quantum Well	1177
14.14	Finding Roots Numerically with FORTRAN	1180
14.14.1	FORTRAN Programs from Scratch	1180
14.14.2	Using Numerical Recipes	1183
14.15	Finding Roots Numerically with C	1187
14.15.1	C Programs from Scratch	1187
14.15.2	Using Numerical Recipes	1189
14.16	Solving Simultaneous Equations	1193
14.16.1	Systems of Linear Equations	1193
14.16.2	Systems of Nonlinear Equations	1197
14.17	Exercises	1200
14.17.1	... using Symbolic Methods	1200
14.17.2	... using Numerical Methods	1202
14.17.3	... using Numerical Recipes	1205
14.17.4	Finding More than One Unknown	1206
14.A	Listing of IDL Procedure <code>lubisect.pro</code>	1210
14.B	Listing of MATLAB Function <code>lubisect.m</code>	1211
14.C	Listing of OCTAVE Function <code>lubisect.m</code>	1212
14.D	Listing of <code>bisect.f</code>	1213
14.E	Listing of <code>bisect.c</code>	1214

15 Solving Partial Differential Equations	1215
15.1 Sample Problems	1217
15.1.1 Motion of a String: The Wave Equation	1217
15.1.2 Heat Flow: The Diffusion Equation	1220
15.1.3 Steady State Heat Flow: The Laplace Equation	1221
15.1.4 Other Situations	1221
15.1.5 Classification of Second-Order PDEs	1222
15.1.6 Equations of Fluid Dynamics: Navier-Stokes' Equations	1223
15.1.6.1 Conservation of Mass: The Equation of Continuity	1224
15.1.6.2 Newton's Second Law	1225
15.1.6.3 A Special Case: Non-viscous Flow	1227
15.1.6.4 A Second Special Case: Sound Waves	1228
15.1.7 A General 1D Equation	1229
15.1.8 A General 2D Equation	1230
15.2 Finite Difference Methods (FDMs) in One Dimension	1230
15.3 Using IDL to Solve 1D PDEs via an FDM	1233
15.3.1 A General Coding	1233
15.3.2 An Example: Simple Harmonic Motion	1234
15.4 Using MATLAB to Solve 1D PDEs via an FDM	1237
15.4.1 A General Coding	1237
15.4.2 An Example: Simple Harmonic Motion	1238
15.5 Using OCTAVE to Solve 1D PDEs via an FDM	1241
15.5.1 A General Coding	1241
15.5.2 An Example: Simple Harmonic Motion	1242
15.6 Using PYTHON to Solve 1D PDEs via an FDM	1245
15.6.1 A General Coding	1245
15.6.2 An Example: Simple Harmonic Motion	1247
15.7 Using FORTRAN to Solve 1D PDEs via an FDM	1250
15.7.1 A General Coding using LAPACK	1250
15.7.2 An Example: Simple Harmonic Motion	1253
15.7.2.1 Setting the Problem	1253
15.7.2.2 Running the FORTRAN Program	1253
15.7.2.3 Displaying the Solution Graphically with IDL	1254
15.7.2.4 Displaying the Solution Graphically with MATLAB	1254
15.7.2.5 Displaying the Solution Graphically with OCTAVE	1254
15.7.2.6 Displaying the Solution Graphically with PYTHON	1255
15.8 Using C to Solve 1D PDEs via an FDM	1255
15.8.1 A General Coding using LAPACK	1255
15.8.2 An Example: Simple Harmonic Motion	1258
15.8.2.1 Setting the Problem	1258
15.8.2.2 Running the C Program	1259
15.8.2.3 Displaying the Solution Graphically with IDL	1259
15.8.2.4 Displaying the Solution Graphically with MATLAB	1259
15.8.2.5 Displaying the Solution Graphically with OCTAVE	1260
15.8.2.6 Displaying the Solution Graphically with PYTHON	1260
15.9 Finite Element Methods (FEMs) in One Dimension	1261
15.9.1 Discretizing the Domain: Preprocessing	1261
15.9.2 Selecting Interpolation or Shape Functions	1262
15.9.3 Formulating the Equations for a Single Element	1264
15.9.4 Assembling the System of Equations	1266
15.9.5 Incorporating the Boundary Conditions	1268
15.10 Using IDL to Solve 1D PDEs via FEMs	1269
15.10.1 A General Coding	1269
15.10.2 An Example: Simple Harmonic Motion	1272
15.11 Using MATLAB to Solve 1D PDEs via an FEM	1274
15.11.1 A General Coding	1274
15.11.2 An Example: Simple Harmonic Motion	1276
15.12 Using OCTAVE to Solve 1D PDEs via an FEM	1279
15.12.1 A General Coding	1279
15.12.2 An Example: Simple Harmonic Motion	1281

15.13	Using PYTHON to Solve 1D PDEs via an FEM	1284
15.13.1	A General Coding	1284
15.13.2	An Example: Simple Harmonic Motion	1286
15.14	Using FORTRAN to Solve 1D PDEs via an FEM	1289
15.14.1	A General Coding using LAPACK	1289
15.14.2	An Example: Simple Harmonic Motion	1293
15.14.2.1	Setting the Problem	1293
15.14.2.2	Running the FORTRAN Program	1293
15.14.2.3	Displaying the Solution Graphically with IDL	1294
15.14.2.4	Displaying the Solution Graphically with MATLAB	1294
15.14.2.5	Displaying the Solution Graphically with OCTAVE	1295
15.14.2.6	Displaying the Solution Graphically with PYTHON	1295
15.15	Using C to Solve 1D PDEs via an FEM	1296
15.15.1	A General Coding using LAPACK	1296
15.15.2	An Example: Simple Harmonic Motion	1299
15.15.2.1	Setting the Problem	1299
15.15.2.2	Running the C Program	1299
15.15.2.3	Displaying the Solution Graphically with IDL	1300
15.15.2.4	Displaying the Solution Graphically with MATLAB	1300
15.15.2.5	Displaying the Solution Graphically with OCTAVE	1301
15.15.2.6	Displaying the Solution Graphically with PYTHON	1301
15.16	Finite Difference Methods (FDMs) in Two Dimensions	1302
15.16.1	The Wave Equation	1302
15.16.2	The Diffusion Equation	1304
15.16.3	The Laplace Equation	1307
15.17	Using IDL to Solve 2D PDEs via an FDM	1310
15.17.1	The Wave Equation	1310
15.17.2	The Diffusion Equation	1315
15.17.3	The Laplace Equation	1321
15.18	Using MATLAB to Solve 2D PDEs via an FDM	1327
15.18.1	The Wave Equation	1327
15.18.2	The Diffusion Equation	1333
15.18.3	The Laplace Equation	1339
15.19	Using OCTAVE to Solve 2D PDEs via an FDM	1345
15.19.1	The Wave Equation	1346
15.19.2	The Diffusion Equation	1351
15.19.3	The Laplace Equation	1357
15.20	Using PYTHON to Solve 2D PDEs via an FDM	1364
15.20.1	The Wave Equation	1364
15.20.2	The Diffusion Equation	1370
15.20.3	The Laplace Equation	1377
15.21	Using FORTRAN to Solve 2D PDEs via an FDM	1385
15.21.1	The Wave Equation	1385
15.21.1.1	The FORTRAN Coding	1385
15.21.1.2	Running the FORTRAN Program	1388
15.21.1.3	Displaying the Solution with IDL	1389
15.21.1.4	Displaying the Solution with MATLAB	1389
15.21.1.5	Displaying the Solution with OCTAVE	1390
15.21.1.6	Displaying the Solution with PYTHON	1391
15.21.2	The Diffusion Equation	1393
15.21.2.1	The FORTRAN Coding	1393
15.21.2.2	Running the Fortran Program	1396
15.21.2.3	Displaying the Solution Graphically with IDL	1396
15.21.2.4	Displaying the Solution Graphically with MATLAB	1397
15.21.2.5	Displaying the Solution Graphically with OCTAVE	1398
15.21.2.6	Displaying the Solution Graphically with PYTHON	1399
15.21.3	The Laplace Equation	1400
15.21.3.1	Creating and Testing the FORTRAN Program	1400
15.21.3.2	Displaying the Solution with IDL	1406
15.21.3.3	Displaying the Solution with MATLAB	1407

15.21.3.4	Displaying the Solution with OCTAVE	1407
15.21.3.5	Displaying the Solution with PYTHON	1408
15.22	Using C to Solve 2D PDEs via an FDM	1410
15.22.1	The Wave Equation	1410
15.22.1.1	The C Coding	1410
15.22.1.2	Running the C Program	1414
15.22.1.3	Displaying the Solution Graphically with IDL	1414
15.22.1.4	Displaying the Solution Graphically with MATLAB	1415
15.22.1.5	Displaying the Solution Graphically with OCTAVE	1416
15.22.1.6	Displaying the Solution Graphically with PYTHON	1417
15.22.2	The Diffusion Equation	1418
15.22.2.1	The C Coding	1418
15.22.2.2	Running the C Program	1422
15.22.2.3	Displaying the Solution Graphically with IDL	1422
15.22.2.4	Displaying the Solution Graphically with MATLAB	1423
15.22.2.5	Displaying the Solution Graphically with OCTAVE	1424
15.22.2.6	Displaying the Solution Graphically with PYTHON	1425
15.22.3	The Laplace Equation	1426
15.22.3.1	Creating and Testing the C Coding	1426
15.22.3.2	Displaying the Solution Graphically with IDL	1432
15.22.3.3	Displaying the Solution Graphically with MATLAB	1433
15.22.3.4	Displaying the Solution Graphically with OCTAVE	1434
15.22.3.5	Displaying the Solution Graphically with PYTHON	1434
15.23	Finite Element Methods (FEMs) in Two Dimensions	1436
15.23.1	Discretizing the Domain: Pre-processing	1436
15.23.2	Selecting the Interpolation or Shape Functions	1438
15.23.3	Formulating the Equations for a Single Element	1439
15.23.4	Assembling the System of Equations	1441
15.23.5	Incorporating the Boundary Conditions	1443
15.24	Using IDL to Solve 2D PDEs via an FEM	1446
15.24.1	A General Coding	1446
15.24.2	An Example: Isotropic Heat Flow	1453
15.25	Using MATLAB to Solve 2D PDEs via an FEM	1455
15.25.1	A General Coding	1455
15.25.2	An Example: Isotropic Heat Flow	1463
15.26	Using OCTAVE to Solve 2D PDEs via an FEM	1465
15.26.1	A General Coding	1465
15.26.2	An Example: Isotropic Heat Flow	1473
15.27	Using PYTHON to Solve 2D PDEs via an FEM	1475
15.27.1	A General Coding	1475
15.27.2	An Example: Isotropic Heat Flow	1482
15.28	Using FORTRAN to Solve 2D PDEs via an FEM	1485
15.28.1	A General Coding using LAPACK	1485
15.28.2	An Example: Isotropic Heat Flow	1494
15.28.2.1	Setting the Problem	1494
15.28.2.2	Running the FORTRAN Program	1494
15.28.2.3	Displaying the Solution Graphically with IDL	1495
15.28.2.4	Displaying the Solution Graphically with MATLAB	1496
15.28.2.5	Displaying the Solution Graphically with OCTAVE	1496
15.28.2.6	Displaying the Solution Graphically with PYTHON	1496
15.28.3	Assessing Accuracy	1497
15.29	Using C to Solve 2D PDEs via an FEM	1498
15.29.1	A General Coding using LAPACK	1498
15.29.2	An Example: Isotropic Heat Flow	1506
15.29.2.1	Setting the Problem	1506
15.29.2.2	Running the C Program	1506
15.29.2.3	Displaying the Solution Graphically with IDL	1507
15.29.2.4	Displaying the Solution Graphically with MATLAB	1508
15.29.2.5	Displaying the Solution Graphically with OCTAVE	1508
15.29.2.6	Displaying the Solution Graphically with PYTHON	1508

15.29.3	Assessing Accuracy	1509
15.30	Exercises	1509

16.I.2	... in 3D	1710
A	Introduction to L^AT_EX	1713
A.1	Creating a Simple Document	1714
A.1.1	Structuring a L ^A T _E X Source File	1714
A.1.2	Creating a PostScript File	1716
A.1.3	Creating a PDF File	1717
A.1.4	Displaying the Document on the Screen	1718
A.1.5	Printing the Document	1718
A.2	Specification of Global Style: The Preamble	1719
A.3	In-Text Specification of Local Style	1721
A.3.1	Type Style	1721
A.3.2	Type Size	1722
A.3.3	White Space	1723
A.3.4	Environments	1724
A.3.5	L ^A T _E X Packages	1725
A.3.6	Miscellaneous Other Capabilities	1725
A.4	Including Equations	1726
A.5	Including Lists	1727
A.6	Including Tables	1728
A.7	Including Illustrations	1730
A.7.1	Using Cut and Paste	1730
A.7.2	Using the <code>graphicx</code> Package	1731
A.7.3	Using the <code>tikz</code> Package	1733
A.7.4	Using the <code>picture</code> Environment and <code>pict2e</code> Package	1736
A.8	Including TOC, LOF, and LOT	1736
A.9	Including an Index	1737
A.10	Including Hyperlinks	1739
A.11	Converting <code>.eps</code> and <code>.ps</code> Files to <code>.pdf</code>	1740
A.12	Using Conditional Expressions in L ^A T _E X	1742
A.13	Error Messages Generated by L ^A T _E X	1743
A.14	The Page Previewer for <code>.dvi</code> Files	1744

A.15	The Spell Checker in UNIX	1745
A.16	A Sample Document	1746
A.17	Miscellaneous Other Features	1747
A.18	References	1754
A.19	Exercises	1755
A.A	Listings	1758
A.A.1	. . . for Windows	1758
A.A.1.1	Batch File <code>ceps2pdf.bat</code>	1758
A.A.1.2	Batch File <code>cps2pdf.bat</code>	1758
A.A.1.3	Batch File <code>rdfileeps.bat</code>	1758
A.A.1.4	Batch File <code>rdfileeps.bat</code>	1758
A.A.2	. . . for UNIX	1759
A.A.2.1	Shell Script <code>ceps2pdf</code>	1759
A.A.2.2	Shell Script <code>cps2pdf</code>	1759
A.A.2.3	Shell Script <code>rdfileeps</code>	1759
A.A.2.4	Shell Script <code>rdfileps</code>	1759
A.A.3	. . . for Windows and UNIX	1760
A.A.3.1	Python Script <code>ExtractFileName.py</code>	1760
